EDUCATION

University of Cincinnati, Cincinnati, Ohio **Graduating: May 2028**
Bachelor of Science, Computer Science GPA: 3.9
Primary Coursework: Data Structures & Algorithms, Operating Systems, Software Engineering, Database Design

SKILLS

Languages: Python, C++, C, Java, JavaScript (React), SQL, Groovy, PowerShell, Batch
DevOps & CI/CD: Jenkins, GitLab CI/CD, Docker, MSBuild, Trivy (SBOM), Git
Databases: Oracle, SQL Server, SQLite
Platforms: Windows, Linux (Ubuntu), WSL, macOS
Frameworks & Tools: Django, REST APIs, WebSockets, JUnit, ruff, uv, Node.js

EXPERIENCE

NLign Analytics | Software Developer Co-op (DevOps) **Jan 2026 - May 2026, Aug 2026 - Present**

- Built and maintained Jenkins CI/CD pipelines (Groovy/Python) for a C++ application and React web application
- Cut pipeline times: JUnit by 25% with a new Linux server; CppUnit/JUnit by up to 8 hours with an early-abort connection check instead of timeout retries; MSBuild queue waits by 1+ hour by capping core usage
- Provisioned Windows 11 build agents and a Linux Docker server hosting Oracle Database for database operations
- Created local developer environments (SQL Server, Oracle) using Docker with detailed setup documentation
- Developed migration and idempotency verification scripts, and automated release version upgrading in the codebase
- Rewrote legacy Batch and PowerShell scripts in Python and added ruff for consistent formatting across developers
- Root-caused and fixed complex failures, including Java multithreading test failures and C++ memory leaks
- Standardized pipelines by unifying scripts and environment variables and merging two git repositories
- Implemented a Trivy-based SBOM and vulnerability-scanning pipeline for the application's dependencies

Tenet3 | Backend Software Engineering Intern **May 2025 - Aug 2025**

- Developed an automated API testing suite to measure response times, error rates, and performance under load
- Integrated the suite into GitLab CI/CD (pipelines, schedules, artifacts) to catch performance regressions before merges and releases
- Built an analytics dashboard that parsed JSON artifacts into interactive charts and graphs for quick review
- Collaborated with a team using GitLab for issues, merge requests, sprint planning, and code reviews

Tenet3 | Solutions Analyst Intern **Aug 2024 - Dec 2024**

- Developed a geographically accurate interactive water network model for an Air Force base supporting outage planning, pressure analysis, and resource management
- Utilized Cameo and MBSE knowledge to create diagrams modeling requirements, architecture, and interfaces
- Wrote a script to convert PDF requirements documents into graph structures for simplified visualization and analysis

Okeana Food Mart | Manager **May 2021 - Aug 2024**

- Led daily operations at the store; trained staff, scheduled shifts, and managed inventory and ordering
- Maintained and updated a large product database, reducing pricing errors and improving profit margins

PROJECTS

Online Multiplayer Games Website | React, Django, WebSockets **Jun 2025 – Aug 2025**

- Implemented lobbies, games, and synchronization over a WebSockets connection with real-time updates, server-side validation, and reconnect handling
- Created a responsive frontend with React for a seamless user experience when playing or joining games
- Designed a backend using REST architecture to handle authentication, data storage, and matchmaking
- Built a SQLite relational database schema to handle data for users, matches, and games
